

EXAKT LEVEL CONTROL KIT

EXAKT-IN-TIME

The EXAKT Level Control Kit simplifies application of the product to be processed on the EXAKT 120EH-250 or 450 rollers independent of the operator. This contributes significantly to maintaining quality, cost and time objectives in terms of productivity and efficiency.

INDEPENDENT

PLC controlled level monitoring independently supplies the product to the production process.

The force effects of the product in the infeed gap are controlled, the rollers are prevented from running dry and the risk of separation is significantly reduced. Controlled product feed can reduce the number of passes and therefore increase productivity.

For smooth production, additional information for the process relevant equipment such as cooling systems or feed systems can be integrated.

Reliability of the process is required for optimal reproducibility, quality and audits for certification or GLP.

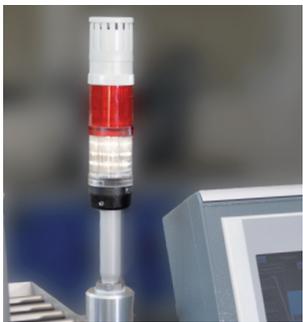

SAFE AND SIMPLE

- Adjustable minimum and maximum fill levels
- Simple touchscreen operation
- Reduction in downtimes through visual and audible signals
- Reliability and error minimization

Consistently maximize your potential for optimization.

Level monitoring with sensor

Signal lamp

Simple touchscreen operation

In addition to the PLC control unit, the EXAKT Level Control Kit includes a stainless steel hopper with electronic sensor, touchscreen and a signal lamp.
