

EXAKT PRODUCTION KIT

PRODUCTIVITY AND EFFICIENCY

To further exploit revenue potential in production, the EXAKT 120 EH-450 should be fitted with Tungsten Carbide rollers.

The result is high intrinsic safety of the machine under continuous operation with maximum output.

Covered rollers and an enlarged hopper optimize the system with regard to a constant flow of large product quantities and occupational safety.

MAXIMUM OUTPUT, LOW LOSS

Tungsten carbide rollers combine high wear resistance with good cooling properties. The shouldered design of the precisely manufactured rollers results in an enlarged working area as well as a uniformly accurate and low-loss feeding of the product. The shape of the product guides ensures that the laterally running product is returned to the production process.

OCCUPATIONAL SAFETY

The enlarged hopper with hand guard and safety sensor feeds the product. Only when the hopper is correctly assembled can the production process be started.

The rollers are covered completely.

The cover is easy to remove and transparent in the front to check the product run without restriction.

EASY TO CLEAN

The hopper is assembled over the product guides and is easy to disassemble.
